WHO ARE WE?

RADIO FREQUENCY INTERFERENCE P--- a--- C--- e---

RFI-PaCe is a student-led research and engineering project involving students from Griffith University and The University of Queensland, bringing together a multidisciplinary team to develop innovative space-based technology for addressing real-world challenges.

We're a diverse team, developing skills across aerospace, electrical, computer and mechanical engineering, alongside research, project management and systems engineering. We also strengthen professional skills such as communication, collaboration and problem-solving through a fast-paced, multidisciplinary environment.

Our project focuses on developing a compact satellite payload capable of detecting, characterising and mapping radio-frequency interference from orbit. By combining advanced sensing technology with satellite systems and data analysis, RFI-PaCe aims to improve our understanding of interference that can affect important Earth observation measurements.

We also provide opportunities for students to engage with research, industry and the wider space sector, building practical experience while contributing to the development of emerging Australian space technology and supporting the next generation of engineers and researchers.

Why Sponsor RFI-PaCe?

Partnering with the RFI-PaCe Project connects your organisation with STEM education, space technology, research and engineering while supporting the development of emerging Australian talent. Sponsorship helps provide students with practical experience in a multidisciplinary research environment, while creating opportunities to engage with industry and the broader Australian space and STEM communities.

All funds raised are invested directly into the project, supporting the development and testing of our technology, equipment and components, and opportunities to participate in research and industry and activities. As the project grows, additional opportunities for sponsor engagement and recognition may also become available.

Partnerships are subject to applicable university policies and project requirements. Sponsor names, logos and intellectual property will only be used with appropriate permission. Sponsorship does not imply endorsement by RFI-PaCe, Griffith University, The University of Queensland or any associated organisation. Benefits may be tailored by mutual agreement. In-kind contributions are welcome and may receive equivalent recognition based on their agreed value.

Contact Us

We welcome the opportunity to discuss RFI-PaCe and our sponsorship opportunities further. If you have any questions about the project, our sponsorship options, or other ways you may be able to support the team, please do not hesitate to get in touch.

We are also happy to consider non-monetary contributions, including equipment, materials, technical support and other resources, and can tailor a partnership to reflect the value of your contribution.

A member of our team will respond to all enquiries as promptly as possible. We look forward to the opportunity to build a meaningful partnership and work together to support the development of Australian space and engineering capabilities.
